THE DATA CODES PRESENTED IN THIS MANUAL ARE A CURRENT SUMMARY OF CODES LISTED IN THE RACE DIVISION'S CENTRAL DATA PROCESSING SYSTEM CODE FILE. THIS VERSION REPLACES ALL PREVIOUS DATA CODE LISTS.

THE PURPOSE OF THESE CODES IS TO CODE DESCRIPTIVE INFORMATION FOR USE ON THE RACE DIVISION'S HAUL-POSITION FORMS, SPECIES CATCH FORMS, LENGTH-FREQUENCY FORMS, SPECIMEN FORMS, PREDATOR-PREY FORMS, TAG RELEASE AND RECOVERY FORMS, AND SPECIMEN SPECIAL STUDY FORMS. THE SOURCE OF THESE CODE LISTINGS IS NOW A SINGLE DISK FILE MAINTAINED AT THE ALASKA FISHERIES SCIENCE CENTER, SEATTLE. NEW ASSIGNMENTS OF DATA CODES MUST BE CONSIDERED PROVISIONAL UNTIL THE NEW CODES HAVE BEEN CHECKED WITH, AND INCORPORATED WITHIN, THE CENTRAL CODE FILE IN SEATTLE. SUBMIT PROPOSED CODES TO THE DATA PROCESSING MANAGER, RACE, AFSC, 526-4137.

GENERAL INSTRUCTIONS

THE VESSEL, CRUISE, AND HAUL NUMBERS MUST BE FILLED OUT ON ALL FORMS. A HAUL NUMBER SHOULD BE ASSIGNED EACH TIME SAMPLING GEAR ENTERS THE WATER.

FOR EACH CRUISE NUMBER, ALL HAULS TAKEN BY A VESSEL MUST BE NUMBERED IN SEQUENTIAL ORDER FROM 001 TO NNN (THE FINAL HAUL), REGARDLESS OF WHETHER HAULS IN THE SERIES WERE STATION TOWS, COMPARATIVE FISHING POWER TOWS, OR OTHER SPECIAL STUDIES.

IF ANY FIELD HAS A MISSING VALUE, LEAVE THE APPROPRIATE BOXES ON THE CODING FORMS BLANK. DO NOT WRITE IN DASHES, X, OR ANY OTHER CHARACTERS.

FOR LEGITIMATE OBSERVATIONS OF A VALUE OF ZERO, WRITE THE ZEROES IN THE APPROPRIATE BOXES. FOR EXAMPLE, IF A TEMPERATURE WAS NOT TAKEN, LEAVE THE TEMPERATURE BOXES BLANK. IF THE TEMPERATURE WAS ZERO DEGREES, WRITE THE ZEROES IN THE BOXES.

DO NOT WRITE ANY COMMAS OR ANY ALPHABETIC CHARACTERS IN ANY NUMERIC FIELDS.

INTEGER NUMERIC VALUES SHOULD BE ENTERED IN THE APPROPRIATE BOXES RIGHT-JUSTIFIED, BLANK FIELDS TO THE LEFT.

FOR FRACTIONAL VALUES, THE DECIMAL POINTS ARE IMPLIED. AS SUCH, DO NOT WRITE ANY DECIMAL POINTS IN THE BOXES. INSTEAD, JUSTIFY THE DIGITS ACCORDING TO THE DECIMAL POINT PRINTED ON THE FORMS.

SEPARATE JUVENILE AND ADULT SPECIES CODES SHOULD ONLY BE USED WHEN ABSOLUTELY REQUIRED FOR HAULS WITH A PARTICULARLY DIFFICULT LENGTH FREQUENCY SUBSAMPLING PROBLEM. WHEN SEPARATE JUVENILE AND ADULT SPECIES CODES ARE USED, THEY MUST BE USED CONSISTENTLY FOR BOTH CATCH AND LENGTH FREQUENCY DATA. THE SIZE RANGE CHOSEN TO REPRESENT JUVENILES (E.G. POLLOCK LESS THAN 20 CM) MUST BE ESTABLISHED BEFORE A SURVEY BEGINS, AND WHENEVER JUVENILES ARE SUBSAMPLED SEPARATELY FROM ADULTS, SEPARATE SPECIES CODES AND LENGTH FREQUENCY FORMS ARE REQUIRED.

FOR SPECIMEN DATA, SPECIMEN I.D. NUMBERS FOR EACH SPECIES MUST BE SEQUENCED 1 THROUGH NNN FOR THE ENTIRE CRUISE, NOT FOR EACH HAUL.

For all method codes, a NULL (i.e. no entry) will represent "Not measured". Note that similar data are grouped together with a prefix like "Surface", so "Surface" covers currents, sea height etc. This is a little awkward, but will allow us to group functionally similar tables as well as have them alphabetical.

177	Same as number 172 with 5mm material in body and 5mm double-bar in wings.
178	83/112 Eastern bottom trawl (gear code 44) fished with an underbag having separate footrope and codend. For detailed net plans see Munro P. T. and D. A. Somerton 2002. Estimating net efficiency of a survey trawl for flatfishes. Fisheries Research 55:267-279.
179	Beam Trawl. 3" pipe frame with semicircle 3" flat strap end runners. 7 ft. wide overall X 2 ft high. 1 1/4 inch nylon net with 118 inch footrope. 5/16 proof coil chain weight sewn on footrope. Net 22 ft overall with 1/2 inch knotless cod end. (Used on Arcturus cruise 199801 towed behind 83/112 trawl with an underbag)
180	Same as 178 with 2' long extensions added to aft end main-trawl riblines from which a beam trawl (gear code 179) is trailed to capture benthic fauna escaping beneath the underbag. The beam trawl is connected to each ribline by a 5 ft-long, 1/2" double braid nylon line using a 1" flat link combined with a G-hook.
181	Same as 178, but fished with 10 web escapement bags designed to collect fauna passing through mesh of the main trawl and the underbag. Bags are centrally located in wings, body and intermediates. Main trawl web escapement bags are located on each wing above the ribline, on the on the top and bottom side of the intermediate where the single mesh and the double mesh sections unite. Underbag web escapement bags are located on each wing below the ribline, on the bottom side of the body, and on the top and bottom sides where the single mesh is joined to the double mesh section. Wing and intermediate bags cover a 20 X 20 mesh area. Bags over the body cover a 60 mesh wide by 20 mesh deep area. All bags have a 1.25" mesh liner.

CODEGEAR DESCRIPTION

182

Modified 83-112 Eastern bottom trawl used in the 2009 opilio selectivity study

Same as 44 except:

- 1) The entire lower panel extending from wing tip through the intermediate has been lined with black 1.5ö (stretch mesh) nylon netting. This liner is laced (#21white twine) to the 2nd bar of the standard netting, closest to the footrope.
- 2) Bar-cut, black, 1.5ö nylon mesh strips, turned 90 degrees, are installed to cover the gaps created by the footrope twine hangings. One side of the cover strip is laced to the trawl's small mesh netting using #21 white twine. The other side is attached by running #40 twine lengthwise through the cover strip mesh and also through each of the standard 5/16ö chain links seized to the footrope (chain hanging attachment points). The strips have been cut wide enough to cover the gaps behind the footrope with enough slack netting so as not to pull on the footrope.
- 3) Additional 82 lbs of 5/8" long link chain is attached to the center of the footrope as follows: On each side of the footrope center, 13' of 5/8" long link chain (39 links, 41 lbs per side) is attached inside the trawl to the footrope starting at the first chain hanging to either side of center, and stretching forward 19 chain hangings. The long link chain is benzeled to each of the standard 3/8ö chain links seized to the footrope (chain hanging attachment points every 8ö). As with the standardized survey trawl, the centermost chain hanging has been removed for the installation of a bottom contact sensor.

SUPPLEMENTARY TABLE MATURITY CODE TABLE 15

FOR SHORTSPINE AND LONGSPINE THORNYHEADS

MALES

- 1 IMMATURE - Gonads small, stringlike, and clear or transparent.
- 2 DEVELOPING OR INACTIVE - Testes swollen, opaque or translucent, colored tan or white. No milt present in ducts or expressible when testis is sectioned.
- 3 MATURE (ACTIVE) - Testis swollen and opaque. Milt present in ducts posterior to testes.

FEMALES

- 1 IMMATURE - Gonads small, stringlike, and clear or transparent.
- 2 DEVELOPING OR INACTIVE - Ovary swollen and translucent. No tiny eggs present. (Note: Often the outer membrane of ovary must be removed to detect eggs.)
- 3 MATURE (ACTIVE) - Ovary swollen and translucent or opaque. Tiny eggs present in ovarian tissues.

Maturity Code Table 16

PACIFIC COD MATURITY CODES (MALES)

1. Immature

Gonads small, close to vertebral column, may be difficult to sex. Testes translucent "bumps" on thread-like strands closely associated with, and often indistinguishable from, the gut mesentery.

2. Developing

Gonads small, to about 1/2 the length of body cavity. Testes appear uniformly ribbon-like, swollen in size, and take on an opaque or increasingly whitish color.

3. Pre-Spawn

Testes are large, swollen white and highly convoluted "leaf-lobed" ribbons filling the entire body cavity. Milt is emitted when wall is compromised (pinched).

4. Spawning

Testes milk freely under slight pressure to the body.

5. Spent

Gonads are still large, but appear flaccid and watery. Testes appear bloodshot. There may be some areas of the testes that still contain milt.

6. Resting

PACIFIC COD MATURITY CODES (FEMALES)

1. Immature

Gonads small, close to vertebral column, may be difficult to sex. Ovaries appear as pink or transparent paired sacs, no oocytes are visible to the eye.

2. Developing

Gonads small, to about 1/2 the length of body cavity. Ovaries form 2 tapered, distinct lobes having well-developed blood vessels. Transparent and/or opaque orange oocytes are distinct and visible through the ovary wall. Oocytes stick together forming a solid mass.

3. Pre-Spawn

Ovaries form 2 large distinct lobes. Most eggs appear as mature clear ova, some oocytes remain interspersed throughout the ovary. Ova are less adhesive resembling the consistency of Cream of Wheat-the breakfast cereal.

4. Spawning

Eggs run under slight pressure to the body. Ova are loose in the ovary.

5. Spent

Gonads are still large, but appear flaccid and watery. Ovaries may contain remnants of disintegrating ova and associated structures.

7. Resting

Ovaries small, firm, may have some black or silver color.
No oocytes are visible to the eye.

SUPPLEMENTARY TABLE - LORAN RATES AND DETERMINATION OF POSITION
AND DISTANCE FISHED

1. FOR ALL HAULS, THE STARTING LATITUDE AND LONGITUDE MUST BE RECORDED ON THE HAUL-POSITION FORM.
2. IF GOOD, ACCURATE, RELIABLE LORAN READINGS ARE AVAILABLE FOR BOTH STARTING AND ENDING POSITIONS FOR THE HAUL, THE ONLY INFORMATION NEEDED IS AN APPROXIMATE (WITHIN 5 NAUTICAL MILES) STARTING LATITUDE AND LONGITUDE, AND THE LORAN READINGS. IN THIS CASE, THE ENDING LATITUDE AND LONGITUDE AND DISTANCE FISHED CAN BE CALCULATED BY THE COMPUTER.
3. IF RADAR FIXES ARE USED INSTEAD OF LORAN, THEN RECORD THE STARTING AND ENDING LATITUDES AND LONGITUDES TO THE NEAREST TENTH OF A MINUTE. LEAVE THE DISTANCE FISHED BLANK SINCE THE COMPUTER CAN CALCULATE THE DISTANCE BETWEEN 2 FIXES.
4. IF EITHER THE STARTING FIX OR THE ENDING FIX (LORAN OR RADAR) IS MISSING, DETERMINE THE DISTANCE FISHED BY DEAD RECKONING, AND ENTER IT ON THE HAUL-POSITION FORM.
5. IF THE COURSE FOLLOWED DURING THE TOW DEVIATES SIGNIFICANTLY FROM A STRAIGHT LINE, THEN THE DISTANCE FISHED MUST BE ESTIMATED OR DETERMINED BY DEAD RECKONING AND ENTERED ON THE FORM.
6. IT IS UNNECESSARY TO SPEND TIME ABOARD SHIP IN CONVERTING LORAN READINGS TO PRECISE LATITUDES AND LONGITUDES. IT IS ALSO UNNECESSARY TO FIGURE DISTANCE FISHED BETWEEN 2 LORAN OR RADAR FIXES. THESE THINGS CAN BE DONE BY COMPUTER. IT IS MOST IMPORTANT, THOUGH, THAT THE LORAN READINGS AND RADAR FIXES BE TAKEN ACCURATELY, AND THAT THEY ARE CAREFULLY RECORDED ON THE FORM.

LORAN READINGS

A FIX IS DETERMINED BY TWO LORAN READINGS - THE FIRST READING AND THE SECOND READING. FOR THE READINGS, EITHER LORAN-C OR LORAN-A, OR COMBINATIONS OF A AND C MAY BE USED.

HOWEVER, THE RATES USED FOR THE FIRST AND SECOND READINGS MUST NOT HAVE THE SAME SLAVE STATION.

THUS, IF A LORAN-C RATE IS USED FOR THE FIRST READING, ANY LORAN-A RATE MAY BE USED FOR THE SECOND READING, AND VICE-VERSA (SEE TABLE 1, FOLLOWING).

BUT IF LORAN-C IS USED FOR THE FIRST AND SECOND READINGS, CERTAIN COMBINATIONS OF RATES MUST BE AVOIDED (SEE TABLE 2, FOLLOWING). LIKEWISE, IF LORAN-A IS USED FOR THE FIRST AND SECOND READINGS, CERTAIN COMBINATIONS OF RATES MUST BE AVOIDED (SEE TABLE 3, FOLLOWING).

IN ADDITION TO THESE RESTRICTIONS, THE CHOICE OF APPROPRIATE PAIRS OF LORAN RATES MAY BE FURTHER QUALIFIED BY WHICH RATES GIVE THE BEST RECEPTION AND INTERSECTIONS.
